

Report for my project – “Encryptify”

Jaiwant Jain – 25JE0355

So far, I have watched crash courses of HTML and CSS to understand their basics and apply to my project. Using that I have developed the home page of my End-to-End encrypted web file storage platform – “Encryptify”. Only the home page is ready for now. I have started watching and understanding JavaScript and will soon apply it to generate AES Keys and encrypt and decrypt the files.

I believe the only challenge I faced was finding good sources for learning HTML/CSS/JavaScript. I wasted some of my time on videos from where I couldn't understand them. So it became hard to keep up with the timeline I wrote in my proposal.
